Education

Covenant University

- BSc in Computer Science, **First Class**

Technical Skills

Languages: TypeScript, JavaScript, Python

Frontend: React, Next.js, HTML, CSS, Tailwind CSS, Vue.js

Backend: Node.js, NestJS, REST APIs

Tools: Git, Postman, Webflow

Data & Infrastructure: PostgreSQL, Prisma, Redis, RabbitMQ

Testing: Jest, React Testing Library, Vitest

Work Experience

500Chow

2024 – Present

Software Engineer

- Rebuilt 500Chow's marketing website from Webflow to React, creating reusable page components and responsive content patterns that made customer-facing pages easier to maintain and extend across marketing initiatives.
- Developed production-grade interfaces with React, Next.js, and TypeScript from Figma designs, with automated testing through Jest and React Testing Library to improve reliability across customer-facing applications.
- Partnered with marketing and design teams across the 500Chow and Serverly websites, translating campaign and conversion goals into responsive landing experiences and production-ready frontend implementations.
- Contributed beyond the frontend by building and testing backend features and integrating third-party services, including Paystack webhooks for real-time payment processing.
- Contributed to the design and implementation of a multi-tenant platform, developing full-stack features that enabled tenant-specific operations, streamlined business workflows, and improved platform scalability.

QuCoon Limited

2023

Fullstack Developer

- Built clean, interactive front-end interfaces from Figma designs using Vue.js, creating reusable UI components that assisted in accelerating project delivery timelines.
- Delivered automation solutions—including FirstBank's FBN DRC project and Sterling Bank's self-service app—using PowerApps and Power Automate, streamlining manual processes and improving operational efficiency.
- Supported product and engineering initiatives by conducting research with the Data Science/Machine Learning team and developing data models used by senior software engineers.

Projects

Watts Your Impact

2026

Next.js • React • TypeScript • Tailwind CSS • Spotify API • YouTube RSS/API

A content-focused podcast website built to help users discover and explore episodes across multiple streaming platforms, with an emphasis on responsive design, content discoverability, and maintainable frontend architecture.

- Built and deployed a responsive podcast website with Next.js, React, and TypeScript, creating reusable components for episode discovery, navigation, and streaming-platform integrations.
- Integrated podcast data from YouTube and Spotify, implementing matching logic based on episode titles, publishing dates, and duration to reconcile content across external sources.
- Improved organic search discoverability through SEO-focused page metadata, semantic HTML and content structure, and search-friendly public episode content.
- Built paginated episode discovery and cross-platform linking flows that let users move between the website, Spotify, Apple Podcasts, and YouTube.
