

Technical skills

- **Languages:** JavaScript (ES6+), TypeScript, Python, Kotlin
 - **Frontend:** React.js, Next.js, Vue.js
 - **Backend:** NestJS, Node.js, AWS Lambda
 - **State & Validation:** Zustand, Zod, Pinia
 - **Architecture & APIs:** RESTful APIs, Event-driven systems
- **Databases:** PostgreSQL
 - **DevOps & Tools:** Git, Docker, Postman
 - **Cloud:** AWS
 - **Others:** Agile (Scrum), API integrations, Webhooks

Education

Covenant University

| BSc in Computer Science, **First Class**

2020 - 2024

Work Experience

Software Engineer, 500 Chow Technologies

2024 - Present

- Built and maintained responsive web applications using Next.js, React.js, TypeScript, and Tailwind CSS, delivering scalable and high-performance user experiences.
- Developed reusable UI components from Figma designs, improving design consistency and accelerating frontend development workflows across multiple projects.
- Rebuilt the company's marketing website using Webflow and JavaScript, creating a faster, modern, and mobile-friendly user experience.
- Collaborated with cross-functional teams to implement intuitive user interfaces, integrate external APIs including Paystack webhooks, and support scalable product features using NestJS and TypeScript.

Fullstack Developer, QuCoon Limited

2023

- Built clean, interactive front-end interfaces from Figma designs using Vue.js, creating reusable UI components that assisted in accelerating project delivery timelines.
- Liaised with banking clients like FirstBank to gather requirements and translate them into clear, actionable insights for the development team.
- Delivered automation solutions—including FirstBank's FBN DRC project and Sterling Bank's self-service app—using PowerApps and Power Automate, streamlining manual processes and improving operational efficiency.
- Supported product and engineering initiatives by conducting research with the Data Science/Machine Learning team and developing data models used by senior software engineers.

Volunteer Work

Hebron Startup Lab

Served as Assistant Lead Backend Developer for an AI-powered flashcard platform, contributing to backend architecture decisions while designing scalable database schemas and building RESTful APIs that improved performance and reduced bottlenecks by 25%. Established coding standards and best practices to enhance code quality and minimize defects, while collaborating within an Agile team to deliver features efficiently and iteratively.

Google Developer Student Club

Gained foundational front-end experience using JavaScript and React while strengthening accessibility and responsive design skills, and contributed to the developer community by documenting learnings and supporting peers with technical challenges.
