Education

Covenant University

- BSc in Computer Science, **First Class**

Technical Skills

Languages: TypeScript, JavaScript, Python

Frontend: React, Next.js, HTML, CSS, Tailwind CSS, Vue.js

Backend: Node.js, NestJS, Django, REST APIs

Testing & Tools: Jest, Vitest, React Testing Library

Data & Infrastructure: PostgreSQL, Prisma, Redis, RabbitMQ

Cloud & Tools: Git, Postman, Webflow

Work Experience

500Chow

2024 – Present

Software Engineer

- Rebuilt and migrated the company marketing website from Webflow to React, building reusable components and responsive interfaces that improved maintainability and user experience.
- Developed production-grade interfaces with React, Next.js, and TypeScript from Figma designs, with automated testing through Jest and React Testing Library to improve reliability across customer-facing applications.
- Developed product and back-office interfaces for ordering, payments, settlements, analytics, and operations, collaborating with product, design, and engineering teams from requirements through release.
- Integrated frontend applications with REST APIs and contributed to NestJS backend services, including payment flows and Paystack webhook integrations.
- Contributed to a multi-tenant platform spanning frontend and backend systems, building tenant-aware workflows and reusable product functionality.

QuCoon Limited

2023

Full-Stack Developer

- Built responsive web interfaces from Figma designs using Vue.js, creating reusable components for enterprise and financial-services applications.
- Contributed to frontend and backend development across banking projects, working with APIs, application logic, and data-driven functionality.
- Delivered workflow automation solutions for FirstBank and Sterling Bank using PowerApps and Power Automate, helping streamline customer-facing and internal processes.

Projects

Watts Your Impact

2026

Next.js • React • TypeScript • Tailwind CSS • Spotify API • YouTube RSS/API

A content-focused podcast website built to help users discover and explore episodes across multiple streaming platforms, with an emphasis on responsive design, content discoverability, and maintainable frontend architecture.

- Built and deployed a responsive podcast website with Next.js, React, and TypeScript, creating reusable components for episode discovery, navigation, and streaming-platform integrations.
- Integrated podcast data from YouTube and Spotify, implementing matching logic based on episode titles, publishing dates, and duration to reconcile content across external sources.
- Improved organic search discoverability through SEO-focused page metadata, semantic HTML and content structure, and search-friendly public episode content.
- Built paginated episode discovery and cross-platform linking flows that let users move between the website, Spotify, Apple Podcasts, and YouTube.
